

Using Hanging Targets

Hanging targets are available on ports 5 and 6 for shooters who prefer not to shoot at the full 25 yards. The targets are hung from the ceiling using the hooks on the ceiling and the target frame. The shooter has two options for the hanging targets, 10 yards and 15 yards.

Loading the cardboard backer

The cardboard backer is hung from the horizontal crossbar of the frame using the two large binder clips. **DO NOT REMOVE THE BINDER CLIPS FROM THE CROSSBAR.** Staple or tape your target to the cardboard as if you were shooting the full 25 yards and clip the cardboard backer to the crossbar.

If the backer is not hung correctly, your target will be too high and you will be shooting into the ceiling. This is not acceptable and you may lose your privilege of using the movable targets.

Correctly hanging your target
